Features

The WT-1041 3G camera can get connected to 3G network by itself with a 3G SIM card. Customer with 3G phone can dial its "number", and just like video calls, you can see the video stream from the camera directly. The camera can remember your phone number as an authorized access. You just need to complete the authentication through SMS+PIN when you first connect to the 3G camera. Using your mobile phone key pad, you can move the camera to two directions to reach more viewing angle. Night Vision mode is also available and will be activated automatically when necessary. System setting can be reached directly through 3G connection to change your password, add/remove user account and activate the video recording. Recorded video will be stored inside the T-Flash memory card.

- Real-time video monitoring

- Two-way audio

- Flexible lens (Pan-tilt horizontal and vertical that can be controlled by the 3G handset)

- Photo taking & Video recording

- Night mode

- No Installations
